

Allows users to access information directly from the core

Improves ability to meet regulatory requirements

Automates processes across the enterprise

Decrease costs and increase transparency across the entire bank

With OnBase by Hyland, users access documents from the same software and technology they're already familiar with, making existing investments more powerful and people more productive.

By utilizing one of the industry's most flexible and comprehensive enterprise content management (ECM) products, the savings generated from automated and accelerated business processes make your bank more profitable. And even though you'll never get rid of all that paper, you can stop letting it slow things down, stop storing it and stop printing it.

Automates paper-based processes to decrease costs

Using OnBase to capture documents and information electronically, you reduce manual, paper-based inefficiencies in every department. Not only do you save printing, shipping and storage costs, you also reduce the risk of theft or damage to documentation.

With electronic documents and information saved in a secure, central database, employees are able to locate what they need with a simple mouse-click. That means they have time to focus on higher-value tasks – like helping customers.

Integrates to increase transparency and proactively comply with regulations

Core banking platforms are necessary to do business, but they don't always integrate well with other systems. They're also limited to handling banking documents. That means they can't manage operational and back office documents, which are extremely important to everyday business.

Integrating OnBase with your organization's core banking platform gives users the ability to work with all the different types of documents – as well as different file formats – they encounter daily.

With OnBase integrating all the software systems used across your bank and its branches, you give them the ability to share information and communicate with each other. No more information silos.

OnBase also streamlines your compliance efforts by providing automated document retention and records management, audit trails, visibility into processes and dashboard views into the lifecycles of documents. This greatly decreases errors and preparation time for audits as well as removes the burden of compliance from employees.

You can also grant regulators convenient, secure, web-based access to the documentation they need, saving preparation time and decreasing on-site visits.

Optimizes processes across the enterprise

Tailored for departments, OnBase has the ability to easily scale across the enterprise. An annual release ensures it easily integrates with any new technologies you invest in, because there's nothing worse than buying technology that you outgrow.

With OnBase, everyone at your bank is more effective. Costs go down, while profits go up. And with work happening quicker and with less errors, your customers are happier.

“With OnBase we can manage reports from our Open Solutions core platform then turn that data into meaningful information – empowering us to make the best decisions to foster continuous growth.”

– Debbie Starkey, operations manager,
First Federal Savings Bank of Elizabethtown
